## ABOUT ME

---

I am a creative and curious person with a big interested in people, technology, and leadership.

Over the years I have gained solid experience working with many awesome teams, company structures and technologies. I have worked with a large (and still growing) number of programming languages, frameworks, systems and services.

In regards to hands on experience I have worked extensively with modern web technology, especially the JavaScript/Node.js ecosystem using technologies such as React.js, Express.js, TypeScript, GraphQL to name a few.

I also enjoy working with scalable cloud solutions. I have experience with almost all major cloud providers, but it's with Microsoft Azures cloud i have the most experience, especially with solutions for continuous delivery and with containers like Docker and Kubernetes.

I think progress comes from working in environments where people are trusted to take decisions and given the tools and and resources needed to solve difficult problems. This have in my experience lead making great solutions and learn important insights through collaboration.

I live outside Stockholm with my wife Camilla, our son Dante and our dog Lulu.

I enjoy walks in the nature, reading and listening to books. I enjoy cooking and of course hanging out with friends and family

## WORK HISTORY <sup>1</sup>

---

### Lead Application Developer - Royal Design Group Holding AB

As Lead Application developer for the domains Royal design & Rum21. I have been in charge of the web development of the E-commerce side of the business. During this time I and have made and spearheaded a great number of improvements ranging from the sites User experience and interfaces to making the entire release flow (Continuous integration) faster, safer and more scalable as also made the continuous delivery aspects more cost efficient.

The state of the codebase when I came aboard was a bit "chaotic", such as there was no-one who really had a bird's eye perspective of the IT related part of the company. During my time at Royal design I spearheaded several projects including making sure there is a complete and highly available documentation over the entire codebase, services and workflows this also covered including a high readability in the codebase.

One of my greatest achievements at Royal design is bringing the production the RoyalDesign & Rum21 domains from an average weight of 11.1 MB in the browser with a load-time of 6.6s (to interactive) to a total weight of 2.1 MB and a load-time of 2.4s. Me and my team accomplished this without removing any major functionality, while continuously improving existing code and adding plenty of new features.

This led to a number of positive trends including: user satisfaction, sales and number of visitors have increased all areas.

---

### Founder - Lachmann Software development

My freelance web development & IT-consulting business.

Specialist in building modern web applications, systems design and UX solutions.

---

<sup>1</sup> This is my recent work-history, for a complete overview please see my [Linkedin page](#)

As a freelancer I have had many assignments and helped all my clients with either big issues. like i did for the company House of education with coming up with an minimum Viable Product (MVP) from scratch to implementing the idea as a new solution that became House of education's major product and largest revenue stream, see a [demo here](#). To smaller implementations as the one I did for the startup Mevisio, where i helped them containerized their applications (with docker) and created a safe "closed-box" solution for their customers with high security standards.

---

### **IT-Consultant/Systems Developer/Scrum master - One Agency**

Working as an IT-consultant at One agency in Stockholm. I worked various assignments mostly focused on front-end/full-stack development including the role as scrum-master, that included companies like [Telenor](#), Fyndiq, Leo Vegas and I also built an in-house back office system for the financial department.

---

### **Lead Front-end Developer - Pepins**

After consulting at Pepins for 6 months they asked me to come work for them directly as their lead front end developer.

The programming stack was PHP, JavaScript, jQuery, HTML, CSS and with tools like Brackets, Sublime, Photoshop, Google Analytics, Hubspot and Wordpress.

I handled the in-house IT support, purchases that relates to IT. I also did lots of the administration in such as issue & project Tracking for the company, using scrum and the atlassian software and project tracking package.

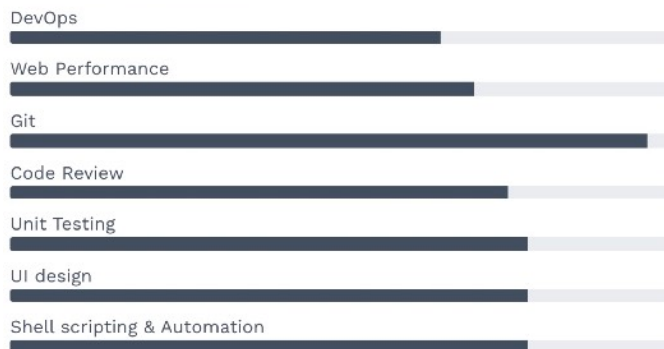

## LEADERSHIP SKILLS

I spearhead projects with a preference for maintaining well-documented and clear roadmaps. I find it important to have a well-trimmed backlog, and believe that a clear goals, both short term and long term in turn leads to ensuring there is clarity throughout the company.

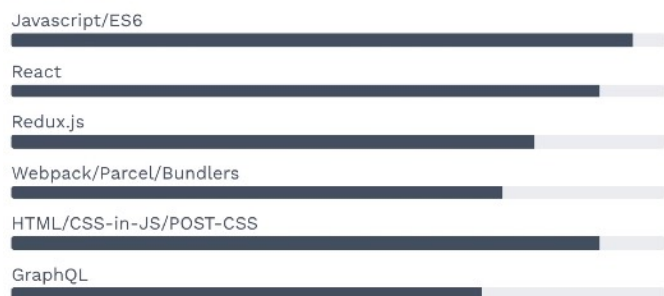

I focus strongly on communication, team health and productivity. My goal is to empower the team to deliver goals on time by using automation and workflows with as simple of a process as possible.

## TECHNICAL SKILLS

### General Technical Skills

### Front end

### Back end

## EDUCATION

---
